

Job Profile: Full-Stack Developer (Junior) Docs Excellence Engineering Team

Please note: This position is not eligible for employment sponsorship. As a result, we are only able to consider candidates who are currently authorized to work in the United States without present or future sponsorship.

At Adyen, everything we do is engineered for ambition.

Adyen provides payments, data, and financial products in a single solution for customers like Meta, Uber, H&M, and Microsoft - making us the financial technology platform of choice. For our teams, we create an environment with opportunities for our people to succeed, backed by the culture and support to ensure they are enabled to truly own their careers. We are motivated individuals who tackle unique technical challenges at scale and solve them as a team.

The Role: Docs Excellence Engineering Team We are looking for 5 Junior to Full-Stack Developers to join our Documentation team in Chicago.. Built on the pillars of experience and experimentation, this team is designed to give you ownership over the Adyen developer experience. You will maintain a strict focus on the human element of documentation—tackling technical debt, implementing front-end UI updates, and experimenting with new workflows to directly free up the wider team for other strategic initiatives.

What you'll do:

- **Enhance the Developer Experience:** Give the Adyen Docs site a fresh coat of paint, align it with corporate branding, and build interactive, developer-focused elements.
- **Tackle Technical Debt:** Streamline our docs-as-code workflows and assist with Grav CMS integrations, clearing overhead so the wider team can move faster.
- **Experiment with Data & AI:** You will find new, interesting ways to proactively enhance the user and agent experience. You will also experiment with AI workflows to improve documentation speed.
- **Formula Fit Execution:** Champion the Adyen Formula by launching fast and iterating based on real-world feedback.

Who you are:

- **Educated & Ready to Build:** You have a 4-year Computer Science degree and a solid foundational understanding of full-stack development (familiarity with React and TypeScript is preferred).

- **AI-Forward, but Grounded:** You know how to accelerate your work with AI tools, but you possess the engineering rigor to validate AI outputs, catch algorithmic mistakes, and maintain clean code.
- **Driven by Experience & Experimentation:** You are passionate about the end-user experience and excited to test, experiment, and find innovative ways to present technical information.
- **Empathetic & Collaborative:** You possess deep empathy for developers navigating complex APIs and enjoy working closely with technical writers and product managers.
